buat database db_pelatihan27

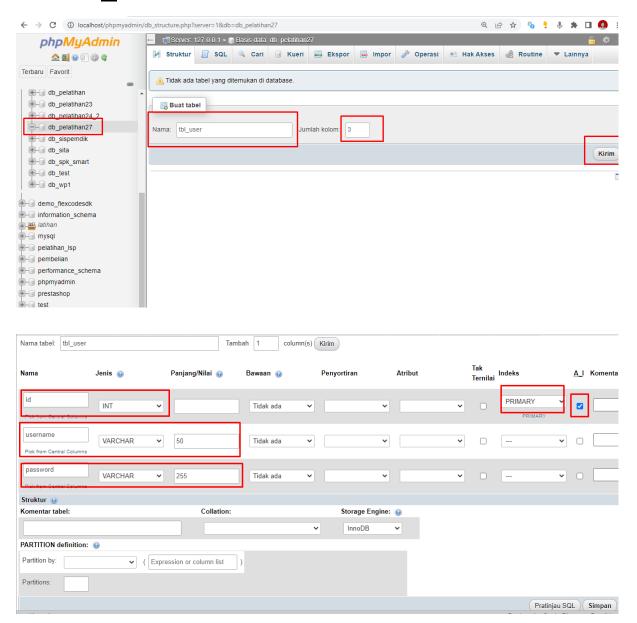

jalankan service mysql dan apache

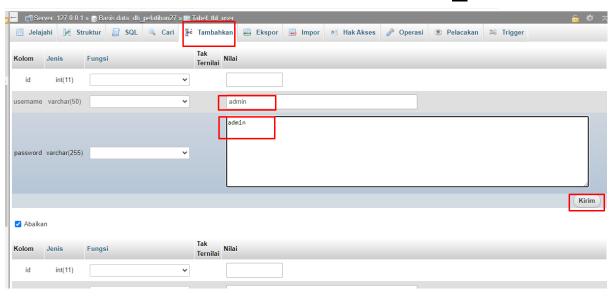

masuk phpmyadmin kemudian buat db baru

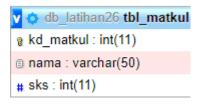

buat tbl_user

menambhakan data kedalam tabel tbl_user

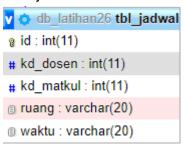

buat tabel matkul

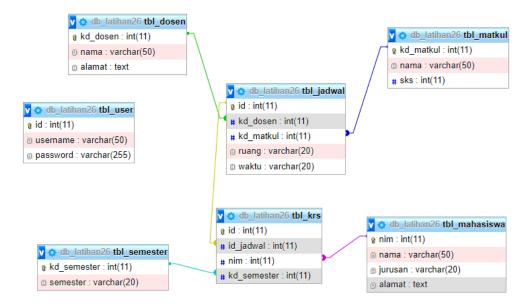

tabel dosen

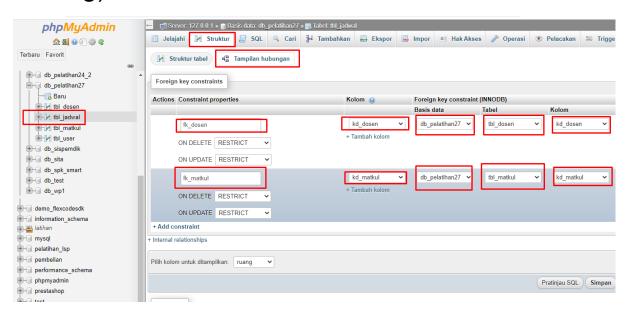

tabel jadwal

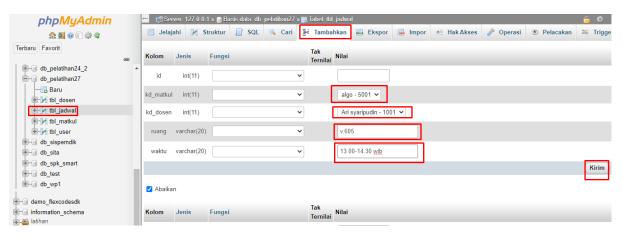

atribut id -> A_I

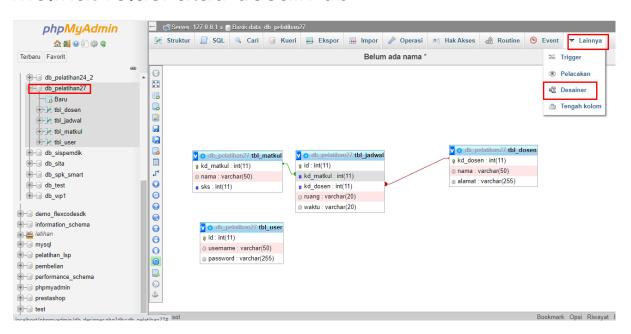

membuat relasi tabel jadwal,matkul dan dosen(pastikan data dalam tabel jadwal masih kosong)

isi data kedalam tabel jadwal

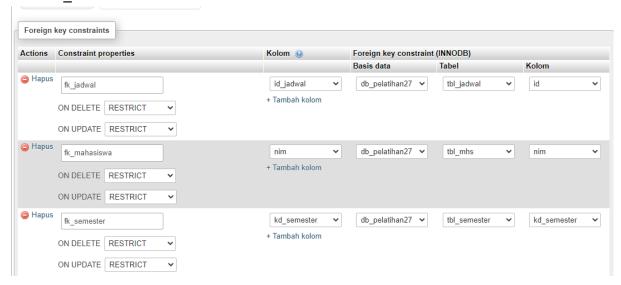

melihat relasi atau desain db

TUGAS SESI 1 contoh isi data tbl_semester

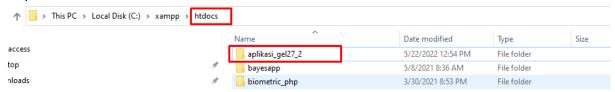

relasi tbl_krs

membuat aplikasi

siapkan direktori dalam htdocs

buat koneksi.php dalam folder project

```
class koneksi{
  public $koneksi;
   function construct(){
$this->koneksi=mysqli connect("localhost","root","","db pelatihan27");
       if(mysqli connect errno()){
   function get matkul(){
       $data=$this->koneksi->query("select * from tbl matkul");
       return $data;
```

buat folder matkul dalam project, dalam folder matkul buat index.php

```
include '../koneksi.php'
?>
      <h1> Data Mata kuliah</h1>
      <a href="tambah.php"><button>Tambah</button></a>
      NO
      Kode Mata Kuliah
      Nama Mata Kuliah
      Aksi
   $i=1;
   $data matkul=$data->get matkul();
   while($record=$data_matkul->fetch_array()){?>
        <?php echo $record['kd matkul'] ?>
        <?php echo $record['nama'] ?>
        <?php echo $record['sks'] ?>
          <a href="edit.php?kd matkul=<?php echo $record['kd matkul']</pre>
?>">Edit</a>
$record['kd matkul'] ?>">Hapus</a>
```

```
</body>
</html>
```

buat tambah.php di dalam folder matkul

```
include '../koneksi.php'
?>
      <h1>Tambah Matkul</h1>
            Kode Matkul
            <input type="number" name="kd_matkul">
            Nama Matakuliah
            <input type="text" name="nama matkul">
            <input type="number" name="sks">
            <button type="submit">Simpan</button>
```

pada koneksi.php tambahakan fungsi berikut(letakan didalam class

```
function add_matkul($kd_matkul,$nama_matkul,$sks){
    $this->koneksi->query("insert into tbl_matkul
values('$kd_matkul','$nama_matkul','$sks')");
    return true;
}
```

buat edit.php di dalam folder matkul

```
include '../koneksi.php';
$kd matkul=$ GET['kd matkul'];
$matkulByID=$data->get matkulById($kd matkul)->fetch assoc();
      <h1>Edit Matkul</h1>
             Kode Matkul
             <input type="number" name="kd matkul" value="<?php
echo $matkulByID['kd matkul']?>" disabled>
             Nama Matakuliah
             <input type="text" name="nama matkul" value="<?php
sks
             <input type="number" name="sks" value="<?php echo
$matkulByID['sks']?>">
             <button type="submit">Simpan</button>
```

tambahkan fungsi berikut dalam koneksi.php

```
function get_matkulById($kd_matkul){
        $data=$this->koneksi->query("select * from tbl_matkul where
kd_matkul='$kd_matkul'");
        return $data;
}

function update_matkul($kd_matkul,$nama_matkul,$sks){
        $this->koneksi->query("update tbl_matkul set
nama='$nama_matkul', sks='$sks' where kd_matkul='$kd_matkul'");
        return true;
}
```

buat hapus.php dalam folder matkul

```
<?php
include '../koneksi.php';

$kd_matkul=$_GET['kd_matkul'];

if($data->delete_matkul($kd_matkul)){
    header('location:index.php');
}
```

tambahkan fungsi berikut dalam koneksi.php

```
function delete_matkul($kd_matkul){
        $this->koneksi->query("delete from tbl_matkul where
kd_matkul='$kd_matkul'");
        return true;
}
```

implementasi untuk tabel lainnya

```
<h1> Silahkan Login</h1>
          Username
          <input type="text" name="username">
          password
          <input type="password" name="password">
          <button type="submit">login</button>
   $password=$ POST['password'];
    $data login=$data->get user($username,$password);
   if(mysqli num rows($data login)>0){
       $ SESSION['username']=$username;
```

buat index.php

buat logut.php

```
<?php
session_start();
session_destroy();
header('location:login.php')
?>
```

tambahkan function berikut dalam file koneksi.php

function get_dosen(tambahkan dalam koneksi.php)

```
function get_dosen() {
    $data=$this->koneksi->query("select * from tbl_dosen");
    return $data;
}
```

function untuk jadwal (masukan ke dalam koneksi.php)

index.php (jadwal)

```
include '../koneksi.php'
      <h1> Data Jadwal</h1>
      <a href="tambah.php"><button>Tambah</button></a>
      NO
      Nama Dosen
      Nama Matkul
      Ruang
      waktu
      Aksi
   $i=1;
   $data_jadwal=$data->get_jadwal();
   while($record=$data jadwal->fetch array()){?>
        <?php echo $i++ ?>
        <?php echo $record['nama dosen'] ?>
        <?php echo $record['nama matkul'] ?>
        <?php echo $record['ruang'] ?>
        <?php echo $record['waktu'] ?>
          <a href="edit.php?id=<?php echo $record['id'] ?>">Edit</a>
         <a href="hapus.php?id=<?php echo $record['id']</pre>
?>">Hapus</a>
```

```
</body>
</html>
```

hapus.php (jadwal)

```
<?php
include '../koneksi.php';

$id=$_GET['id'];

if($data->delete_jadwal($id)){
    header('location:index.php');
}
```

tambah.php(jadwal)

```
Matakuliah
                     $data3=$data->get_matkul();
                     while($record=$data3->fetch array()){
value="'.$record['kd matkul'].'">'.$record['nama'].'</option>';
              Ruang
              <input type="text" name="ruang">
              <input type="text" name="waktu">
              <button type="submit">Simpan</button>
       if(isset($ POST['ruang'])){
          $kd dosen=$ POST['kd dosen'];
          $ruang=$ POST['ruang'];
          if($data->add jadwal($kd dosen,$kd matkul,$ruang,$waktu)){
```

```
header('location:index.php');
}

}

?>
</body>
</html>
```
